

Course Description

This course allows you to explore the System Generator tool and to gain the expertise you need to develop advanced, low-cost DSP designs. This intermediate course in implementing DSP functions focuses on learning how to use System Generator for DSP, design implementation tools, and hardware co-simulation verification. Through hands-on exercises, you will implement a design from algorithm concept to hardware verification using the Xilinx FPGA capabilities.

Level – DSP 3

Course Duration – 2 days

Price –

Course Part Number – DSP11000-11-ILT

Who Should Attend? – System engineers, system designers, logic designers, and experienced hardware engineers who are implementing DSP algorithms using the MathWorks MATLAB® and Simulink® software and want to use Xilinx System Generator for DSP design

Prerequisites

- Experience with the MATLAB and Simulink software
- Basic understanding of sampling theory

Software Tools

- Xilinx ISE® Design Suite: System Edition 11.1
- MATLAB with Simulink software R2008a or R2008b

After completing this comprehensive training, you will have the necessary skills to:

- Describe the System Generator design flow for implementing DSP functions
- Identify Xilinx FPGA capabilities and how to implement a design from algorithm concept to hardware simulation
- List various low-level and high-level functional blocks available in System Generator
- Identify the high-level blocks available for FIR and FFT designs
- Design a multiple-clock-based System Generator system
- Embed two System Generator designs into a larger design

Course Outline

Day 1

- Introduction to System Generator
- Simulink Software Basics
- **Lab 1:** Using the Simulink Software
- Basic Xilinx Design Capture
- **Lab 2:** Getting Started with Xilinx System Generator
- Signal Routing
- **Lab 3:** Signal Routing
- Implementing System Control
- **Lab 4:** Implementing System Control

Day 2

- Multi-Rate Systems
- **Lab 5:** Designing a MAC-Based FIR
- Filter Design
- **Lab 6:** Designing a FIR Filter Using the FIR Compiler Block
- Xilinx System Generator, Project Navigator, and Platform Studio Integration
- **Lab 7:** System Generator and Project Navigator Integration
- **Lab 8:** System Generator, Project Navigator, and Platform Studio Integration

Lab Descriptions

- **Lab 1:** Using the Simulink Software – Learn how to use the toolbox blocks in the Simulink software and design a system. Understand the effect sampling rate.
- **Lab 2:** Getting Started with Xilinx System Generator – Illustrates a DSP48-based (ML505 board) design. Perform hardware co-simulation verification targeting an ML505 board.
- **Lab 3:** Signal Routing – Design padding and unpadding logic by using signal routing blocks.
- **Lab 4:** Implementing System Control – Design an address generator circuit by using blocks and Mcode.
- **Lab 5:** Designing a MAC-Based FIR – Using a bottom-up approach, design a MAC-based bandpass FIR filter and verify through hardware co-simulation by using an ML505 board.
- **Lab 6:** Designing a FIR Filter Using the FIR Compiler Block – Design a bandpass FIR filter by using the FIR Compiler block to demonstrate increased productivity. Verify the design through hardware co-simulation by using the ML505 board.
- **Lab 7:** System Generator and Project Navigator Integration – Learn how to embed two System Generator designs into a larger design and how VHDL created by System Generator can be incorporated into the simulation model of the overall system.
- **Lab 8:** System Generator, Project Navigator, and Platform Studio Integration – Learn how to embed two System Generator designs into a larger design and how VHDL created by System Generator can be incorporated into the simulation model of the overall system.
